(1) Since stocks represent paper to be printed in the future, the Day's Supply is calculated by dividing publishers stocks in tons by the projected consumption in the next following month.

The projected consumption is based on the assumption that the seasonal adjusted rate in the coming month will be equal to the average of the two preceding months.

(a) **SOURCE**: Based on data in A.P.I. Capacity Survey issued November, 1985, plus subsequent revisions announced since that time.

(b) **SOURCE**: Canadian Pulp and Paper Association.

(c) In 1974 a number of newsprint producers reduced the grams per square meter (g/m²) of newsprint from 52 to 48.8. A given area of printing surface of 48.8 g/m² paper weighs less than the same area of 52 g/m² paper. The capacity figures for 1974 have been shown on both the old and new basis to provide a continuity of data.

(d) Canadian capacity has been revised beginning with 1975 to include downtime of less than twenty four hours in operating hours. Previously, downtime of less than eight hours was included in operating hours. This extra line of information provides a "bridge" between the old method and the new method of calculating Canadian capacity.

* Machine transfer from other grades and improvements.

[1] Uncoated Free Sheet

[2] Linerboard

[3] Conversion to Uncoated Groundwood Paper

[4] Two new machines are replacing five old machines with a net gain of 80,000 tons. The first machine started up in June and the second machine started up in December 1982.

[5] Net increase - one new machine with capacity of 490 tons/day replacing four existing ones.

[6] Machine permanently shut down.

[7] One new machine replacing two old machines with a net gain of 20,000 tons.

[8] Permanent retirement from Newsprint - Conversion and Rebuild to Coated Groundwood in 3rd quarter, 1986.

[9] Permanent retirement from Newsprint - reconfiguration to Uncoated Free Sheet.

[10] Permanently idle machine - has been on an indefinite shutdown since April, 1982.

[11] Rebuild of No. 9 machine - 40,000 tons of Newsprint and 45,000 tons of Uncoated Groundwood.

[12] Loss of Newsprint at this mill because of conversion to Uncoated Groundwood will be absorbed by other mills.

[13] New machine replacing an old machine with a net gain of 60,000 tons.

(1) Since stocks represent paper to be printed in the future, the Day's Supply is calculated by dividing publishers stocks in tons by the projected consumption in the next following month.

The projected consumption is based on the assumption that the seasonal adjusted rate in the coming month will be equal to the average of the two preceding months.

N.A. - Not Available.

(a) SOURCE: Based on data in A.P.I. Capacity Survey issued November, 1983, plus subsequent revisions announced since that time.

(b) SOURCE: Canadian Pulp and Paper Association.

(c) In 1974 a number of newsprint producers reduced the grams per square meter (g/m^2) of newsprint from 52 to 48.8. A given area of printing surface of 48.8 g/m^2 paper weighs less than the same area of 52 g/m^2 paper. The capacity figures for 1974 have been shown on both the old and new basis to provide a continuity of data.

(d) Canadian capacity has been revised beginning with 1975 to include downtime of less than twenty-four hours in operating hours. Previously, downtime of less than eight hours was included in operating hours. This extra line of information provides a "bridge" between the old method and the new method of calculating Canadian capacity.

* Machine transfer from other grades and improvements.

[1] Uncoated Free Sheet

[2] Linerboard

[3] Conversion to Uncoated Groundwood Paper

[4] Two new machines are replacing five old machines with a net gain of 80,000 tons. The first machine started up in June and the second machine started up in December 1982.

[5] Net Increase - one new machine with capacity of 430 tons/day replacing four existing ones.

[6] Machine permanently shut down.

[7] One new machine replacing two old machines with a net gain of 20,000 tons.

[8] Permanent retirement from Newsprint - Conversion and Rebuild to Coated Groundwood on 3rd quarter 1982.

[9] Permanent retirement from Newsprint - reconfiguration to Uncoated Free Sheet.

[10] Permanently idle machine - has been on an indefinite shutdown since April, 1982.

[11] Rebuild of No. 9 machine - 40,000 tons of Newsprint and 45,000 tons of Uncoated Groundwood.

[12] Loss of Newsprint at this mill because of conversion to Uncoated Groundwood will be absorbed by other mills.

[13] New machine replacing an old machine with a net gain of 80,000 tons.

(1) Since stocks represent paper to be printed in the future, the Day's Supply is calculated by dividing publishers stocks in tons by the projected consumption in the next following month.

The projected consumption is based on the assumption that the seasonal adjusted rate in the coming month will be equal to the average of the two preceding months.

(a) **SOURCE:** Based on data in A.P.I. Capacity Survey issued November, 1985, plus subsequent revisions announced since that time.

(b) **SOURCE:** Canadian Pulp and Paper Association.

(c) In 1974 a number of newsprint producers reduced the grams per square meter (g/m^2) of newsprint from 52 to 48.8. A given area of printing surface of 48.8 g/m^2 paper weighs less than the same area of 52 g/m^2 paper. The capacity figures for 1974 have been shown on both the old and new basis to provide a continuity of data.

(d) Canadian capacity has been revised beginning with 1975 to include downtime of less than twenty-four hours in operating hours. Previously, downtime of less than eight hours was included in operating hours. This extra line of information provides a "bridge" between the old method and the new method of calculating Canadian capacity.

P - Preliminary R - Revised

(1) Since stocks represent paper to be printed in the future, the Day's Supply is calculated by dividing publishers stocks in tons by the projected consumption in the next following month.

The projected consumption is based on the assumption that the seasonal adjusted rate in the coming month will be equal to the average of the two preceding months.

(a) **SOURCE:** Based on data in A.P.I. Capacity Survey Issued November, 1985, plus subsequent revisions announced since that time.

(b) **SOURCE:** Canadian Pulp and Paper Association.

(c) In 1974 a number of newsprint producers reduced the grams per square meter (g/m^2) of newsprint from 52 to 48.8. A given area of printing surface of 48.8 g/m^2 paper weighs less than the same area of 52 g/m^2 paper. The capacity figures for 1974 have been shown on both the old and new basis to provide a continuity of data.

(d) Canadian capacity has been revised beginning with 1975 to include downtime of less than twenty-four hours in operating hours. Previously, downtime of less than eight hours was included in operating hours. This extra line of information provides a "bridge" between the old method and the new method of calculating Canadian capacity.

(1) Since stocks represent paper to be printed in the future, the Day's Supply is calculated by dividing publishers stocks in tons by the projected consumption in the next following month.

The projected consumption is based on the assumption that the seasonal adjusted rate in the coming month will be equal to the average of the two preceding months.

(a) **SOURCE:** Based on data in A.P.I. Capacity Survey issued November, 1985, plus subsequent revisions announced since that time.

(b) **SOURCE:** Canadian Pulp and Paper Association.

(c) In 1974 a number of newsprint producers reduced the grams per square meter (g/m^2) of newsprint from 52 to 48.8. A given area of printing surface of 48.8 g/m^2 paper weighs less than the same area of 52 g/m^2 paper. The capacity figures for 1974 have been shown on both the old and new basis to provide a continuity of data.

(d) Canadian capacity has been revised beginning with 1975 to include downtime of less than twenty-four hours in operating hours. Previously, downtime of less than eight hours was included in operating hours. This extra line of information provides a "bridge" between the old method and the new method of calculating Canadian capacity.

* Machine transfer from other grades and improvements.
1/ Uncoated Free Sheet
2/ Linerboard
3/ Conversion to Uncoated Groundwood Paper
4/ Two new machines are replacing five old machines with a net gain of 80,000 tons. The first machine started up in June and the second machine started up in December 1982.
5/ Net increase - one new machine with capacity of 490 tons/day replacing four existing ones.
6/ Machine permanently shut down.
7/ One new machine replacing two old machines with a net gain of 20,000 tons.
8/ Permanent retirement from Newsprint - Conversion and Rebuild to Coated Groundwood in 3rd quarter, 1986.
9/ Permanent retirement from Newsprint - reconfiguration to Uncoated Free Sheet.
10/ Permanently idle machine - has been on an indefinite shutdown since April, 1982.
11/ Rebuild of No. 9 machine - 40,000 tons of Newsprint and 45,000 tons of Uncoated Groundwood.
12/ Loss of Newsprint at this mill because of conversion to Uncoated Groundwood will be absorbed by other mills.
13/ New machine replacing an old machine with a net gain of 85,000 tons.
14/ Net gain - new machine replacing an old machine.

(1) Since stocks represent paper to be printed in the future, the Day's Supply is calculated by dividing publishers stocks in tons by the projected consumption in the next following month.

The projected consumption is based on the assumption that the seasonal adjusted rate in the coming month will be equal to the average of the two preceding months.

(a) **SOURCE:** Based on data in A.P.I. Capacity Survey issued November, 1985, plus subsequent revisions announced since that time.

(b) **SOURCE:** Canadian Pulp and Paper Association.

(c) In 1974 a number of newsprint producers reduced the grams per square meter (g/m²) of newsprint from 52 to 48.8. A given area of printing surface of 48.8 g/m² paper weighs less than the same area of 52 g/m² paper. The capacity figures for 1974 have been shown on both the old and new basis to provide a continuity of data.

(d) Canadian capacity has been revised beginning with 1975 to include downtime of less than twenty-four hours in operating hours. Previously, downtime of less than eight hours was included in operating hours. This extra line of information provides a "bridge" between the old method and the new method of calculating Canadian capacity.

P - Preliminary   R - Revised

(1) Since stocks represent paper to be printed in the future, the Day's Supply is calculated by dividing publishers stocks in tons by the projected consumption in the next following month.

The projected consumption is based on the assumption that the seasonal adjusted rate in the coming month will be equal to the average of the two preceding months.

(a) **SOURCE**: Based on data in A.P.I. Capacity Survey Issued November, 1985, plus subsequent revisions announced since that time.

(b) **SOURCE**: Canadian Pulp and Paper Association.

(c) In 1974 a number of newsprint producers reduced the grams per square meter (g/m_) of newsprint from 52 to 48.8. A given area of printing surface of 48.8 g/m_ paper weighs less than the same area of 52 g/m_ paper. The capacity figures for 1974 have been shown on both the old and new basis to provide a continuity of data.

(d) Canadian capacity has been revised beginning with 1975 to include downtime of less than twenty-four hours in operating hours. Previously, downtime of less than eight hours was included in operating hours. This extra line of information provides a "bridge" between the old method and the new method of calculating Canadian capacity.

(1) Since stocks represent paper to be printed in the future, the Day's Supply is calculated by dividing publishers stocks in tons by the projected consumption in the next following month.

The projected consumption is based on the assumption that the seasonal adjusted rate in the coming month will be equal to the average of the two preceding months.

(a) **SOURCE:** Based on data in A.P.I. Capacity Survey Issued November, 1985, plus subsequent revisions announced since that time.

(b) **SOURCE:** Canadian Pulp and Paper Association.

(c) In 1974 a number of newsprint producers reduced the grams per square meter (g/m^2) of newsprint from 52 to 48.8. A given area of printing surface of 48.8 (g/m^2) paper weighs less than the same area of 52 g/m^2 paper. The capacity figures for 1974 have been shown on both the old and new basis to provide a continuity of data.

(d) Canadian capacity has been revised beginning with 1975 to include downtime of less than twenty-four hours in operating hours. Previously, downtime of less than eight hours was included in operating hours. This extra line of information provides a "bridge" between the old method and the new method of calculating Canadian capacity.

* Machine transfer from other grades and improvements.
(1) Uncoated Free Sheet
(2) Linerboard
(3) Conversion to Uncoated Groundwood Paper
(4) Two new machines are replacing five old machines with a net gain of 80,000 tons. The first machine started up in June and the second machine started up in December 1982.
(5) Net Increase - one new machine with capacity of 490 tons/day replacing four existing ones.
(6) Machine permanently shut down.
(7) One new machine replacing two old machines with a net gain of 20,000 tons.
(8) Permanent retirement from Newsprint - Conversion and Rebuild to Coated Groundwood in 3rd quarter, 1986.
(9) Permanent retirement from Newsprint - reconfiguration to Uncoated Free Sheet.
(10) Permanently idle machine - has been on an indefinite shutdown since April, 1982
(11) Rebuild of No. 9 machine - 40,000 tons of Newsprint and 45,000 tons of Uncoated Groundwood.
(12) Loss of Newsprint at this mill because of conversion to Uncoated Groundwood will be absorbed by other mills.
(13) New machine replacing an old machine with a net gain of 85,000 tons.
(14) Net gain - new machine replacing an old machine.
(15) Machine Shutdown.
(16) Start up of a machine shutdown in April 1983 (see Bowater).

(1) Since stocks represent paper to be printed in the future, the Day's Supply is calculated by dividing publishers stocks in tons by the projected consumption in the next following month.

SOURCE: American Newspaper Publishers Association.

The projected consumption is based on the assumption that the seasonal adjusted rate in the coming month will be equal to the average of the two preceding months.

NOTE: Annual Capacity, includes changes in capacity only for the portion of the year in which they are actually effective.

N.A. - Not Available.

(a) **SOURCE**: Based on data in A.P.I. Capacity Survey Issued November, 1985, plus subsequent revisions announced since that time.

(b) **SOURCE**: Canadian Pulp and Paper Association.

(c) In 1974 a number of newsprint producers reduced the grams per square meter (g/m^2) of newsprint from 52 to 48.8. A given area of printing surface of 48.8 (g/m^2) paper weighs less than the same area of 52 g/m^2 paper. The capacity figures for 1974 have been shown on both the old and new basis to provide a continuity of data.

(d) Canadian capacity has been revised beginning with 1975 to include downtime of less than twenty-four hours in operating hours. Previously, downtime of less than eight hours was included in operating hours. This extra line of information provides a "bridge" between the old method and the new method of calculating Canadian capacity.

* Machine transfer from other grades and improvements.
(1) Uncoated Free Sheet
(2) Linerboard
(3) Conversion to Uncoated Groundwood Paper
(4) Two new machines are replacing five old machines with a net gain of 80,000 tons. The first machine started up in June and the second machine started up in December 1982.
(5) Net Increase - one new machine with capacity of 490 tons/day replacing four existing ones.
(6) Machine permanently shut down.
(7) One new machine replacing two old machines with a net gain of 20,000 tons.
(8) Permanent retirement from Newsprint - Conversion and Rebuild to Coated Groundwood in 3rd quarter, 1986.
(9) Permanent retirement from Newsprint - reconfiguration to Uncoated Free Sheet.
(10) Permanently idle machine - has been on an indefinite shutdown since April, 1982
(11) Rebuild of No. 9 machine - 40,000 tons of Newsprint and 45,000 tons of Uncoated Groundwood.
(12) Loss of Newsprint at this mill because of conversion to Uncoated Groundwood will be absorbed by other mills.
(13) New machine replacing an old machine with a net gain of 85,000 tons.
(14) Net gain - new machine replacing an old machine.
(15) Machine Shutdown.
(16) Start up of a machine shutdown in April 1983 (see Bowater).

(1) Since stocks represent paper to be printed in the future, the Day's Supply is calculated by dividing publishers stocks in tons by the projected consumption in the next following month.

The projected consumption is based on the assumption that the seasonal adjusted rate in the coming month will be equal to the average of the two preceding months.

N.A. - Not Available.

(a) SOURCE: Based on data in A.P.I. Capacity Survey Issued November, 1985, plus subsequent revisions announced since that time.

(b) SOURCE: Canadian Pulp and Paper Association.

(c) In 1974 a number of newsprint producers reduced the grams per square meter (g/m^2) of newsprint from 52 to 48.8. A given area of printing surface of 48.8 (g/m^2) paper weighs less than the same area of 52 g/m^2 paper. The capacity figures for 1974 have been shown on both the old and new basis to provide a continuity of data.

(d) Canadian capacity has been revised beginning with 1975 to include downtime of less than twenty-four hours in operating hours. Previously, downtime of less than eight hours was included in operating hours. This extra line of information provides a "bridge" between the old method and the new method of calculating Canadian capacity.

* Machine transfer from other grades and improvements.
(1) Uncoated Free Sheet
(2) Linerboard
(3) Conversion to Uncoated Groundwood Paper
(4) Two new machines are replacing five old machines with a net gain of 80,000 tons. The first machine started up in June and the second machine started up in December 1982.
(5) Net Increase - one new machine with capacity of 490 tons/day replacing four existing ones.
(6) Machine permanently shut down.
(7) One new machine replacing two old machines with a net gain of 20,000 tons.
(8) Permanent retirement from Newsprint - Conversion and Rebuild to Coated Groundwood in 3rd quarter, 1986.
(9) Permanent retirement from Newsprint - reconfiguration to Uncoated Free Sheet.
(10) Permanently idle machine - has been on an indefinite shutdown since April, 1982
(11) Rebuild of No. 9 machine - 40,000 tons of Newsprint and 45,000 tons of Uncoated Groundwood.
(12) Loss of Newsprint at this mill because of conversion to Uncoated Groundwood will be absorbed by other mills.
(13) New machine replacing an old machine with a net gain of 85,000 tons.
(14) Net gain - new machine replacing an old machine.
(15) Machine Shutdown.
(16) Start up of a machine shutdown in April 1983 (see Bowater).

(1) Since stocks represent paper to be printed in the future, the Day's Supply is calculated by dividing publishers stocks in tons by the projected consumption in the next following month.

The projected consumption is based on the assumption that the seasonal adjusted rate in the coming month will be equal to the average of the two preceding months.

(a) SOURCE: Based on data in A.P.I. Capacity Survey Issued November, 1985, plus subsequent revisions announced since that time.

(b) SOURCE: Canadian Pulp and Paper Association.

(c) In 1974 a number of newsprint producers reduced the grams per square meter (g/m^2) of newsprint from 52 to 48.8. A given area of printing surface of 48.8 (g/m^2) paper weighs less than the same area of 52 g/m^2 paper. The capacity figures for 1974 have been shown on both the old and new basis to provide a continuity of data.

(d) Canadian capacity has been revised beginning with 1975 to include downtime of less than twenty-four hours in operating hours. Previously, downtime of less than eight hours was included in operating hours. This extra line of information provides a "bridge" between the old method and the new method of calculating Canadian capacity.

(1) Since stocks represent paper to be printed in the future, the Day's Supply is calculated by dividing publishers stocks in tons by the projected consumption in the next following month.

The projected consumption is based on the assumption that the seasonal adjusted rate in the coming month will be equal to the average of the two preceding months.

(a) SOURCE: Based on data in A.P.I. Capacity Survey Issued November, 1985, plus subsequent revisions announced since that time.

(b) SOURCE: Canadian Pulp and Paper Association.

(c) In 1974 a number of newsprint producers reduced the grams per square meter (g/m^2) of newsprint from 52 to 48.8. A given area of printing surface of 48.8 (g/m^2) paper weighs less than the same area of 52 g/m^2 paper. The capacity figures for 1974 have been shown on both the old and new basis to provide a continuity of data.

(d) Canadian capacity has been revised beginning with 1975 to include downtime of less than twenty-four hours in operating hours. Previously, downtime of less than eight hours was included in operating hours. This extra line of information provides a "bridge" between the old method and the new method of calculating Canadian capacity.
